The prior art do not teach an editing system for editing a plurality of media materials to produce a media composition including interlaced frames having multiple fields, and identified by an edit decision list, said the editing system comprising a combination of :

an editing machine for performing editing actions on one of said plurality of media meted materials in response to editing instructions corresponding to said the editing actions; and

an EDL generator for generating, in response to said the editing actions, an edit decision list wherein the edit decision list includes a sequence of said the interlaced frames corresponding to said result the media composition and a field relationship between said the interlaced frames, the field relationship represents an alternating cadence of video fields associated with each frame of the media composition as specified in claim 1.

The prior art do not teach an editing system for editing a plurality of media materials to produce a media composition including interlaced frames having multiple fields: and-identified by an edit decision list, the editing system comprising a combination of an editing machine for performing, editing actions on one of the plurality of media materials in response to editing instructions corresponding to the editing

actions; and **an EDL generator for generating, in response to the editing actions an edit decision list wherein the edit decision list includes a sequence of the interlaced frames corresponding to the media composition and a field relationship between the interlaced frames, wherein the EDL generator generates the edit decision list including metadata for communicating with a downstream processor and wherein the metadata indicates which fields of the media composition are to be handled in a similar fashion by said the downstream processor as specified in claim 7.**

The prior art do not teach an editing system for editing a composition of motion video enabling an editor to **specify segments of source material and to specify a sequence of the specified segments of source material, wherein each segment of source material is defined in an edit decision list by a reference to the source material and a portion of the source material using time codes, and wherein the sequence of the specified segments is defined in the edit decision list by a position in time for each segment using time codes, wherein each time code used in the edit decision list has an associated video field indicator and pulldown phase of the indicated video field, and wherein the associated video field indicator and an indicator of the pulldown phase are stored in the edit decision list as specified in claim 13.**

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
